

A woman with dark hair, wearing a black bikini, is sitting on the wooden deck of a boat. She has a diving mask on her head and a snorkel in the background. The background shows a blue sea and a clear sky.

sea is calling

COLLECTION

seacsub.com 2024

A fantastic italian story

1971

Marco Arata and Attilio Rapallini, true sea lovers just barely into their twenties, start small-scale production of pronged heads and spear heads from scratch and SEAC (Subacquea E Affini Carasco) is founded.

1975

The first logo is created and the first official SEAC catalog is published.

1980

Production of the first spring-loaded and sling spearguns starts.

1982

SEAC reaches another milestone with the manufacture of new wetsuits, including the legendary Privilege.

1985

The development and production of the legendary Asso speargun mark yet another important step for SEAC and the spearfishing world as a whole.

1988

Stefano Makula, a SEAC sponsored athlete, reaches an incredible depth of -102 meters in variable weight freediving on the island of Giannutri and thus becomes world champion.

1989

Production expands with the new SEAC BCDs, including the Jump model.

1990

SEAC inaugurates its new plants in San Colombano Certenoli.

1993

A new adventure starts with in-house production of regulators.

1995

The iconic Extreme mask is born!

1999

In April, Nicola Brischigiario breaks a new scientific world record in distance freediving under ice (85m in 1'40") on Lake Verney, using SEAC equipment.

2001

SEAC designs and manufactures a revolutionary BCD: the Pro2000.

2004

The second generation of SEAC arrives when Daniele Arata joins the company.

2006

SEAC further expands its product range and divides it into different lines: SCUBA, Snorkeling, Freediving, Swimming.

If the sea is calling, we answer with the sun.

The entire Seacsub industrial facility is now powered by renewable energy, thanks to a powerful new photovoltaic system.

This is our most recent investment in sustainability and comes on top of numerous other initiatives striving towards a sustainable future for all, such as re-shoring strategies and in-house production to reduce our carbon footprint deriving from transportation, our continuous research into new packaging with low environmental impact, and implementing company policies to reduce waste. After all, only by taking care of the whole environment and those who live in it can you claim to respect the sea.

Headquarters in San Colombano Certenoli (Genova, Italy)
Over 15,000 m² of internal logistical area

The US Branch: SEAC USA Corp. - Miami, Florida (U.S.A.)

Strict product safety through both proprietary equipment
and quality procedures

Just four years after we inaugurated the new internal moulding department, the benefits are clear:

- A 50% reduction in plastic waste
- Reduction in the impact of transport
- Greater control over finished product quality
- Better in-stock availability

GOOD PLASTIC. ONLY WHERE IT'S NEEDED.

Starting with the fin shapers and the packaging for accessories like Bio Gel and neoprene adhesive, SEAC has begun replacing many plastic packaging with 100% recyclable cardboard.

This icon identifies all fins made using the new FRC™ Fully Responsive Compound technology, which can achieve better performing, thinner, lighter, sturdier fins, while also eliminating the risk of breakage or permanent deformation.

This icon indicates that we have recently conducted a study on the fin in order to optimize its plastic materials. We at SEAC have undertaken this analysis to improve flexion and increase the elastic response from all fins produced in the San Colombano Certenoli location.

MODEL	PN	WEIGHT (lbs)
INT 230 BAR	0350110002004A	2.7
DIN 300 BAR	0350110002005A	2.3

NEW CASE INCLUDED

DIN 300 BAR

INT 230 BAR

1. Ergonomic integrated dive/pre-dive lever for adjusting breathing effort with the Venturi Effect.
2. OWS System: front shield and button in soft polyurethane to optimize the action as well as the passage of water, reducing breathing effort, and thanks to the synergy between the front and side openings, it avoids the chance of free-flows in head-on currents.
3. The special geometry of the exhaust tee prevents water from seeping into the second stage even when in powerful side currents, and also directs expelled bubbles to the sides of face, eliminating annoying obstructions in your field of view.
4. New hose retainer features a carefully researched length and diameter to avoid any pinch points. Optimized curvature, ergonomic for users.
5. Hot-forged first stage to reduce weight as much as possible, with both HP and LP ports arranged ergonomically.
Sandblasted chrome. High-performance balanced diaphragm. 2 HP ports. 4 LP ports.
6. ICE Kit: first-stage antifreeze system that minimizes the risk of freezing in cold water.

OPTIMIZED CROTCH STRAP

Separated harness from air bladder.

OPTIONAL

2 TRIM POCKETS INCLUDED

- Freedom, made to measure: every part of the SEAC Modular BCD is interchangeable. You can simply and quickly adjust the structure of the BCD and find just the right buoyancy in any situation.
- Standard connections: the backpack for the SEAC Modular BCD can accommodate different bags and backpacks thanks to its standard-gauge eyelets for fastening using straps and other fasteners. The padding prevents a irritation from clamps in contact with the back.
- Convenient for travel: SEAC Modular is the BCD that fits conveniently in your luggage, making it ideal for dive vacations. It disassembles quickly, takes up little space, and weighs just 7.3 lbs, so you can use your own BCD set to just the right measurements even when you travel.
- Basic equipment: the basic SEAC Modular equipment includes: harness with removable shoulder straps and soft backbone with removable steel core, a 30 lbs donut double bladder, 2 quick-release pockets for weights, anodized aluminum D-rings and stainless steel waist buckle.

-  COMFORT FIT
-  LOW-DRAG DESIGN
-  EN 1809:2014 + A1:2016

2 WEIGHT POCKETS INCLUDED

2 WEIGHT POCKETS INCLUDED

- Ultra-practical harness: quick and easy to put on. Simply fasten the flat center buckle and adjust the front straps and shoulder straps.
- "Frame to back" system: the adjustments for the shoulder straps start directly from the backpack. The BCD won't warp, so the weight stays distributed correctly.
- Independent bladder: The bladder in the SEAC EQ-PRO "slides" along the harness completely independently. When inflated, the pocket area rests comfortably along your sides, so it won't squeeze your abdominal area.
- Functional, low-drag design: even more compact bladder and a contour designed to be more hydrodynamic. Handle inside the backpack, making it easy to transport.
- Excellent fit for men and women: 3D Mesh inserts wrap fully around the shoulder straps and prevent rubbing.
- Swivel buckles adapt the harness to the female body. Available in 5 sizes.
- Dry weight (size L): 8.7 lbs (including hose).
- Rear weight pockets standard (Trim Pocket).

UNIFLEECE (THERMAL UNDERSUIT)

Double-layer thermal undersuit ideal for wearing under a drysuit. Lightweight (~ 600 g.) and breathable, it's ideal for staying warm during dives in especially cold places. The front zips from both ends to make it quick and easy to put on. The easy-access zip pockets are perfect for carrying small tools.

SPACE 7 MM

Feeling at ease during a dive is always a matter involving many different factors, most importantly, a comfortable wetsuit. For this reason, the Space has been developed in a warm, comfortable neoprene designed for proper stretch, regardless of body shape. Seac Space is available in many sizes, designed with specific cuts for both men and women. Donning is quick and easy even in non-optimal conditions like high temperature and high humidity. It is a one-piece wetsuit made of UltraStretch neoprene and rear zip with inner flap to ensure a barrier against water leakage. Aquastop system on wrists and ankles are provided with double neoprene cones and zippers. SEAC Space has been designed to guarantee great freedom of movement in all conditions, thanks to the embossed inserts positioned on the inside of the elbows and behind the knees. Chest and shoulder areas, the most stressed equipment friction points, have been reinforced with geometric pattern design inserts. A rubber sleeve insert has been positioned on left wrist to firmly hold your dive computer. Seac Space is available in 5 or 7 mm neoprene.

A trident, the icon of Neptune and also the symbol of the creation of SEAC in 1971, when it was a small producer of pronged heads and spear heads. A wave, emblem of the sea, below which the word SUB is submerging. This is our beautiful historic logo, which we wanted to revive in all its splendor on the livery of some of our underwater fishing and freediving products. A dive into the past with our gaze firmly fixed on the future.

ASSO C/R (WITH POWER REGULATOR)

MADE IN ITALY

- Power regulator.
- Muzzle in light alloy with larger holes to optimize water drainage.
- Outer barrel: aluminum alloy cylinder, diameter 40-mm.
- Included: steel shaft, injector, harpoon, harpoon loader, line.
- Rubber handle. More ergonomic for a natural grip, secure and without compressing any nerves. Suitable for right- or left-handed use, with or without gloves.

Fins

FREEDIVING
2024

Seacsub is proud to present the new FRC™ Fully Responsive Compound technology, now appearing in the blades of our SEAC BM-30 and SEAC W-22 long fins.

It all started with some research into a blend of polymers that would enable us to make fins that deliver performance similar to glass and carbon fiber while eliminating the well-known fragility issues with these composites.

This is how we arrived at a compound with brand new mechanical characteristics, which Seacsub's design and manufacturing experience transformed into a new technology, dedicated to making even higher-performing fin blades.

FRC™ Fully Responsive Compound technology now satisfies all of our requirements:

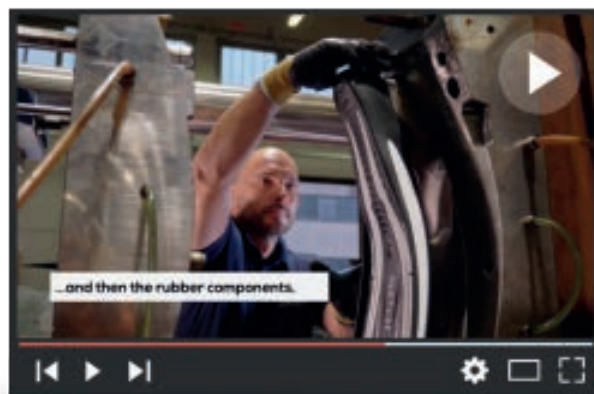

- negative fins and thinner blades than previous versions in technopolymer, thanks to the fluidity and specific weight of the material;
- the design of the product capitalizes on the mechanical properties of the compound for an elastic response similar to that of glass and carbon fiber;
- no risk of breakage or permanent deformation thanks to the advanced durability and elevated resistance to yielding or breakage in the compound, even at low temperatures;
- durability and high elastic modulus make it possible to take full advantage of the typical geometry of glass and carbon fiber blades without the need for reinforcing or protective ribs;
- lower carbon footprint compared to technopolymers commonly used in the sector, and absolutely no toxic elements.

BUDDY

- Low profile, hydrodynamic tube to reduce water resistance and facilitates breathing.
- Full control of freestyle stroke movement without any interruption derived by the lateral "breathing".
- Increases cardiovascular strength and lung capacity.
- Adjustable and lightweight headboard, with integrated pad, ensures a comfortable fit.
- Quick release on both sides.
- Silicone mouthpiece, reduces jaw fatigue to a minimum.
- Purge valve positioned to maximize compensation of excess water.

Quick release on both sides
