

seac

sea is calling

2025 COLLECTION 

A fantastic italian story

If the sea is calling, we answer with the sun.

The entire Seacsub industrial facility is now powered by renewable energy, thanks to a powerful new photovoltaic system.

This is our most recent investment in sustainability and comes on top of numerous other initiatives striving towards a sustainable future for all, such as re-shoring strategies and in-house production to reduce our carbon footprint deriving from transportation, our continuous research into new packaging with low environmental impact, and implementing company policies to reduce waste.

After all, only by taking care of the whole environment and those who live in it can you claim to respect the sea.

Headquarters in San Colombano Certenoli (Genova, Italy)
Over 15,000 m² of internal logistical area

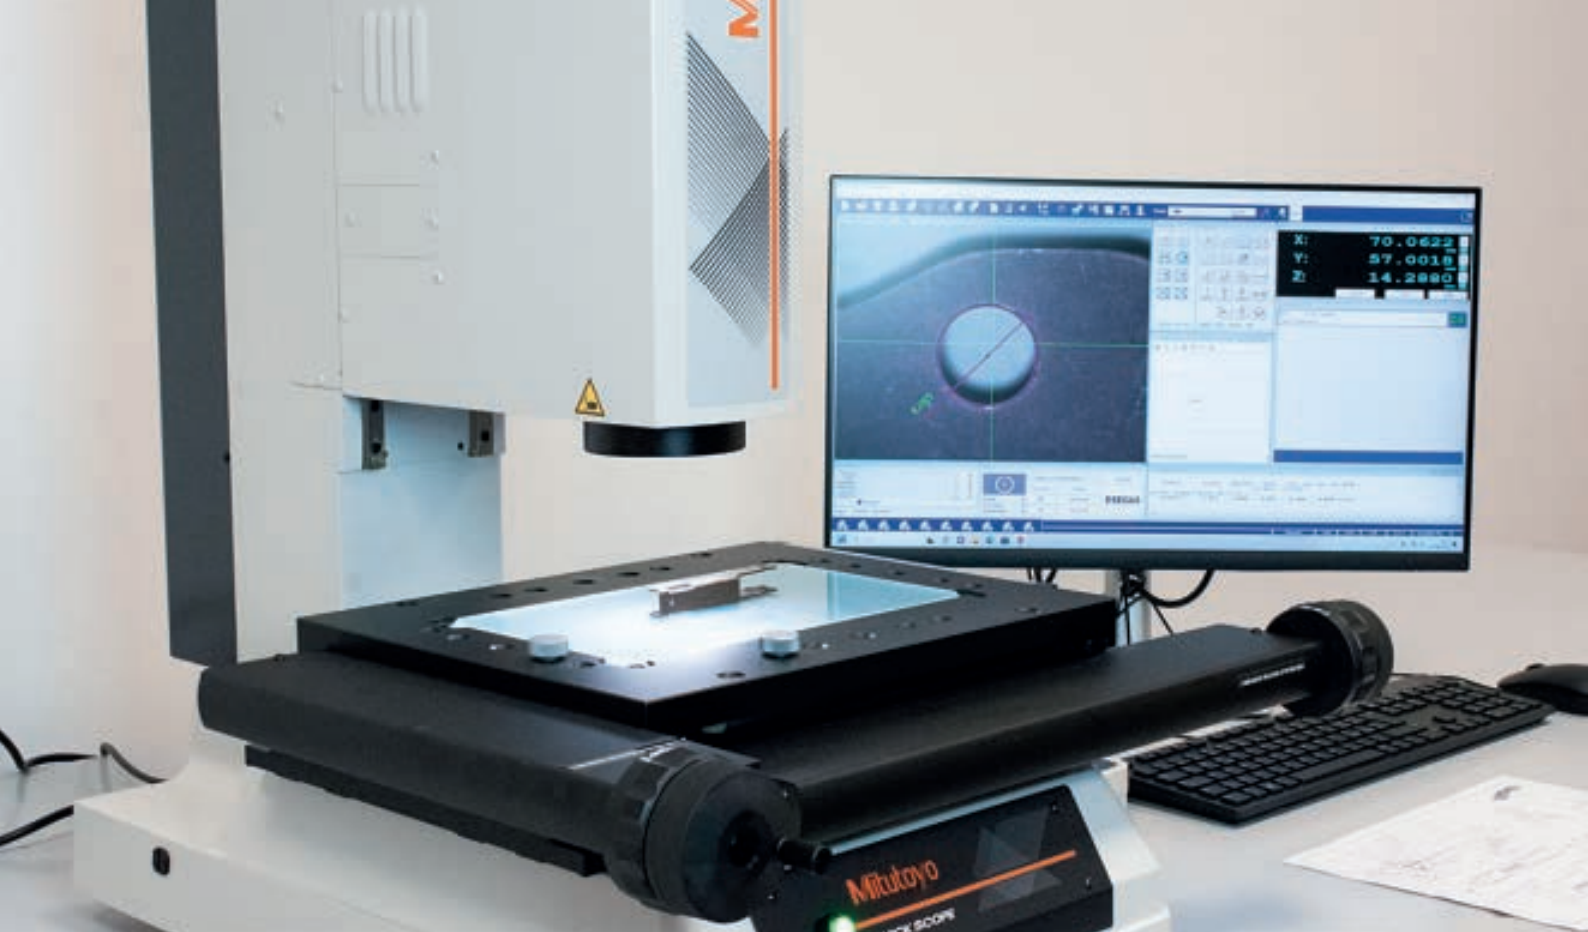

The US Branch: SEAC USA Corp. - Miami, Florida (U.S.A.)

Strict product safety through both proprietary equipment
and quality procedures

Innovative tools are constantly being updated
to produce accurate and reliable products.

After we inaugurated the new internal moulding department, the benefits are clear:

- A 50% reduction in plastic waste
- Reduction in the impact of transport
- Greater control over finished product quality
- Better in-stock availability

We have replaced a lot of plastic packaging with 100% recyclable cardboard for a more sustainable future.

This icon identifies all fins made using the new FRC® Fully Responsive Compound technology, which can achieve better performing, thinner, lighter, sturdier fins, while also eliminating the risk of breakage or permanent deformation.

This icon indicates all fins on which was conducted a special study to optimise their plastic materials. We undertook this analysis to improve flexion and increase elastic response.

REGULATORS

SCUBA 2025

IT500 ICE

- Ergonomic knob integrated with a dive / pre dive lever for breathing effort adjustment and Venturi control.
- OWS (Optimized Water Strainer) system: optimized front cover that breaks the frontal flow to reduce the risk of water pressure on the inhalation diaphragm and preventing accidental freeflow, given the design of the front cover and side case vents, prevents the possibility of freeflow due to frontal water pressure and currents.
- Soft PU front cover and purge button that optimize both purge button action and water flow, reducing inhalation effort.
- The special geometry of the exhaust deflector that prevents water entering into the second stage even with the presence of strong front or side currents along with channels directing the exhaust bubbles to the sides of the face avoiding any annoying exhaust bubbles in front of the field of view.
- New hose guard designed in diameter and length to avoid any kinking of the LP hose.
- Optimized and ergonomic curvature for the user.
- Hot forged first stage to minimize weight and have all outlets both HP and LP ergonomically pre-oriented.
- Sandblasted chrome plating. High-performance membrane balanced. Number 2 HP ports. Number 4 LP ports.
- ICE kit: first stage anti-freeze system that minimizes the problem of freezing in cold water.

SNORKELING 2025

Security controls on the SEAC full-face masks

- SEAC abides by two fundamental principles in designing its *full-face snorkeling masks*:
- the user should need to employ the least possible **breathing effort, comparable to natural breathing**, out of the water and in a relaxing situation;
- and the level of residual carbon dioxide **CO₂** inside the skirt while inhaling must be **well below the safety limits**.

Even though there is no specific European regulation governing the manufacture of full-face snorkeling masks, SEAC has developed a series of **specific tests** that comply with the values set forth by the following European regulations:

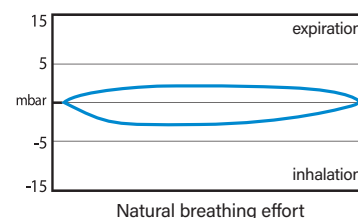

- EN 1972:2015 establishes the requirements for the design and manufacture of snorkel tubes, limited to breathing effort;
- EN 16805:2015 establishes the requirements for the design and manufacture of dive masks;
- EN 136:2000 establishes the minimum requirements for the manufacture of full-face respiratory protection masks, limited to tests checking the CO₂ in inhaled air;
- EN 250:2014 regarding open-circuit compressed-air self-contained breathing apparatus and its components, limited to tests checking the CO₂ in inhaled air, related to the full face masks or oro-nasal half masks for SCUBA diving.

The ITALCERT test report on the residual CO₂ content.

SEAC had its full-face masks also tested by a third-party laboratory. Please see the results below:

CO₂ content limit values on full-face SEAC (test results with 25 RPM / 2.5 l)

In the **SEAC labs**, batches of full-face masks are tested with **Ansti machines**, specifically to measure the **dynamic performance of human breathing**, and with **specific SEAC equipment** to **check levels of CO₂** in the air inhaled through the masks.

MESU

- Low profile, hydrodynamic tube that reduces friction and enhances breathing performance
- Easy control of stroke movement in freestyle without the need to turn the head for side breathing.
- Facilitates cardiovascular training and increases lung capacity.
- Elastic, lightweight front band with integrated soft insert and silicone headband for maximum comfort.
- Adjustment buckles on both sides.
- Silicone mouthpiece, minimizes jaw fatigue.
- Bleeder valve positioned to maximize the discharge of excess water.

The trident, an icon of Neptune but also a symbol of SEAC's birth when, in 1971, it was a small production of harpoons and spears.

The wave, emblem of the sea under which the SUB inscription plunges.

This is our beautiful historical logo that we wanted to resurface in all its glory on the liveries of some of our products dedicated to spearfishing and freediving.

A plunge into the past with an eye always on the future.

FREEDIVING & SPEARFISHING 2025

SEAC is proud to present the new FRC® - Fully Responsive Compound technology, featured right now on the blades of our SEAC BM-30 and SEAC W-22 long fins.

It all started with the search for a polymer blend that would allow us to produce fins with similar performance to those made of carbon fiber and glass, but eliminating the well-known fragility problems of these composites.

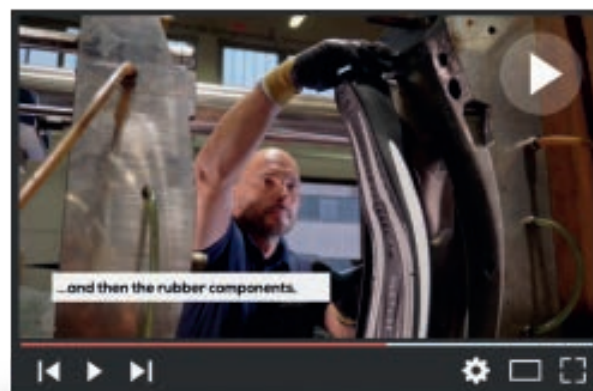

We then arrived at a compound with unprecedented mechanical properties that SEAC's design and manufacturing experience has transformed into a new technology dedicated to making even higher performance fin blades.

FRC® - Fully Responsive Compound technology now meets all our needs:

- negative fins and blades that are thinner than their predecessors in technopolymer thanks to the fluidity and specific weight of the material;
- the product design takes advantage of the mechanical properties of the compound for an elastic response similar to that of carbon and glass fiber;
- no risk of breakage or permanent deformation thanks to the high resilience and high resistance to yield and breakage of the compound, even at low temperatures;
- resistance and high elastic modulus allow you to fully exploit the typical geometry of carbon fiber and glass blades without having to use any reinforcement or protection ribs;
- reduced carbon footprint compared to common technopolymers used in the sector and total absence of toxic elements.

BM-30

- Blade in new highly reactive technopolymer for immediate thrust.
- New BM-30 foot pocket with shorter stringers to make the most of the elastic response of the blade.
- 30° curvature angle to reduce fatigue and optimize performance.
