

A full-page underwater photograph serves as the background. It depicts a female diver in a black Seac wetsuit, complete with a BCD, regulator, and a prominent yellow air hose. She is wearing a diving mask with orange accents and is swimming towards the left. To her right, a large sea turtle with a yellowish-brown shell and patterned head is swimming in the same direction. The water is clear and blue, with sunlight filtering down from the surface. The bottom of the frame shows a rocky seabed covered in some marine life.

seac

sea is calling

2026 COLLECTION 

A fantastic italian story

1971

Marco Arata and Attilio Rapallini, true sea lovers just barely into their twenties, start small-scale production of pronged heads and spear heads from scratch and SEAC (Subacquea E Affini Carasco) is founded.

1975

The first logo is created and the first official SEAC catalog is published.

1980

Production of the first spring-loaded and sling spearguns starts.

1982

SEAC reaches another milestone with the manufacture of new wetsuits, including the legendary Privilege.

1985

The development and production of the legendary Asso speargun mark yet another important step for SEAC and the spearfishing world as a whole.

1988

Stefano Makula, a SEAC sponsored athlete, reaches an incredible depth of -102 meters in variable weight freediving on the island of Giannutri and thus becomes world champion.

1989

Production expands with the new SEAC BCDs, including the Jump model.

1990

SEAC inaugurates its new plants in San Colombano Certenoli.

1993

A new adventure starts with in-house production of regulators.

1995

The iconic Extreme mask is born!

A fantastic italian story

2018

The new Driver and Partner wrist-mount diving computers arrive on the market, followed by Action and Action HR.

2023

SEAC unveils its new warehouse, with which it can power the entire company with solar energy using photovoltaic panels.

2019

SEAC opens a department dedicated to plastic molding of masks and fins at its San Colombano Certenoli plant.

2024

Valentina Cafolla wins double world record in apnea under ice (140m) in Anterselva.

2021

Now arriving to market, the new SCREEN scuba computer.

2025

New corporate governance: Daniele Arata is the new SEAC President.

TABLET, the first Bluetooth® computer and the LED TANK PROBE are born.

2022

The new APNEA and APNEA HR wrist-mount freediving computers arrive on the market.

2023

FRC® technology is here! Fully Responsive Compound makes it possible to make lighter, sturdier fins.

*the story continues
on the following pages...*

Since
1971

If the sea is calling, we answer with the sun.

The entire Seacsub industrial facility is now powered by renewable energy, thanks to a powerful new photovoltaic system.

This is our most recent investment in sustainability and comes on top of numerous other initiatives striving towards a sustainable future for all, such as re-shoring strategies and in-house production to reduce our carbon footprint deriving from transportation, our continuous research into new packaging with low environmental impact, and implementing company policies to reduce waste.

After all, only by taking care of the whole environment and those who live in it can you claim to respect the sea.

Headquarters in San Colombano Certenoli (Genova, Italy)
Over 15,000 m² of internal logistical area

Strict product safety through both proprietary equipment
and quality procedures

Innovative tools are constantly being updated
to produce accurate and reliable products.

After we inaugurated the new internal moulding department, the benefits are clear:

- A 50% reduction in plastic waste
- Reduction in the impact of transport
- Greater control over finished product quality
- Better in-stock availability

IT500 ICE - BLACK

**NEW
2026**

- Ergonomic knob integrated with a dive / pre dive lever for breathing effort adjustment and Venturi control.
- OWS (Optimized Water Strainer) system: optimized front cover that breaks the frontal flow to reduce the risk of water pressure on the inhalation diaphragm and preventing accidental freeflow, given the design of the front cover and side case vents, prevents the possibility of freeflow due to frontal water pressure and currents.
- Soft PU front cover and purge button that optimize both purge button action and water flow, reducing inhalation effort.
- The special geometry of the exhaust deflector that prevents water entering into the second stage even with the presence of strong front or side currents along with channels directing the exhaust bubbles to the sides of the face avoiding any annoying exhaust bubbles in front of the field of view.
- New hose guard designed in diameter and length to avoid any kinking of the LP hose.
- Optimized and ergonomic curvature for the user.
- Hot forged first stage to minimize weight and have all outlets both HP and LP ergonomically pre-oriented.
- High-performance membrane balanced. Number 2 HP ports. Number 4 LP ports.
- ICE kit: first stage anti-freeze system that minimizes the problem of freezing in cold water.

MASKS

SCUBA 2026

PLAY VIDEO

Those who use a diving mask knows well how glass fogging can ruin a dive. This phenomenon occurs when the normal humidity inside the mask comes into contact with the cold glass surface, turning into tiny droplets that obscure the view.

To limit this problem, which depends on a complex set of physical and behavioral factors, we have applied a special plasma treatment, called **"ANTI-FOG,"** directly to the glass of our masks. The treatment makes the mask glass hydrophilic, and once the user performs a simple preparation, the protection activates to prevent condensation, allowing a clear view during immersion.

HOW TO PREPARE THE MASK BEFORE USE:

- Before entering the water, wet or immerse the mask for a couple of minutes.
- Gently rub the inside of the lenses with your fingertips while it is submerged.
- Empty and rinse with clean water.
- Repeat steps if necessary.

⚠ ATTENTION: BASIC INFORMATION ON THE ANTI-FOG TREATMENT

The lenses of this mask have been integrated following an innovative treatment aimed at reducing fogging. Due to the innovative nature of this type of treatment, the effectiveness, duration, and consistency of its anti-fog performance cannot be guaranteed and are subject to a natural and progressive reduction based on care, storage, and use. Exclusion of defects: The reduction or loss of the ANTI-FOG effect is an expected characteristic of the product and does not constitute a conformity defect under the legal warranty.

Security controls on the SEAC full-face masks

- SEAC abides by two fundamental principles in designing its *full-face snorkeling masks*:
- the user should need to employ the least possible **breathing effort, comparable to natural breathing**, out of the water and in a relaxing situation;
- and the level of residual carbon dioxide **CO₂** inside the skirt while inhaling must be **well below the safety limits**.

Even though there is no specific European regulation governing the manufacture of full-face snorkeling masks, SEAC has developed a series of **specific tests** that comply with the values set forth by the following European regulations:

- EN 1972:2015 establishes the requirements for the design and manufacture of snorkel tubes, limited to breathing effort;
- EN 16805:2015 establishes the requirements for the design and manufacture of dive masks;
- EN 136:2000 establishes the minimum requirements for the manufacture of full-face respiratory protection masks, limited to tests checking the CO₂ in inhaled air;
- EN 250:2014 regarding open-circuit compressed-air self-contained breathing apparatus and its components, limited to tests checking the CO₂ in inhaled air, related to the full face masks or oro-nasal half masks for SCUBA diving.

The ITALCERT test report on the residual CO₂ content.

SEAC had its full-face masks also tested by a third-party laboratory. Please see the results below:

CO₂ content limit values on full-face SEAC (test results with 25 RPM / 2.5 l)

In the **SEAC labs**, batches of full-face masks are tested with **Ansti machines**, specifically to measure the **dynamic performance of human breathing**, and with **specific SEAC equipment** to **check levels of CO₂** in the air inhaled through the masks.

MESU

- Low profile, hydrodynamic tube that reduces friction and enhances breathing performance
- Easy control of stroke movement in freestyle without the need to turn the head for side breathing.
- Facilitates cardiovascular training and increases lung capacity.
- Elastic, lightweight front band with integrated soft insert and silicone headband for maximum comfort.
- Adjustment buckles on both sides.
- Silicone mouthpiece, minimizes jaw fatigue.
- Bleeder valve positioned to maximize the discharge of excess water.

FREEDIVING & SPEARFISHING 2026

SEAC is proud to present the new FRC® - Fully Responsive Compound technology, featured right now on the blades of our SEAC BM-30 and SEAC W-22 long fins.

It all started with the search for a polymer blend that would allow us to produce fins with similar performance to those made of carbon fiber and glass, but eliminating the well-known fragility problems of these composites.

We then arrived at a compound with unprecedented mechanical properties that SEAC's design and manufacturing experience has transformed into a new technology dedicated to making even higher performance fin blades.

FRC® - Fully Responsive Compound technology now meets all our needs:

- negative fins and blades that are thinner than their predecessors in technopolymer thanks to the fluidity and specific weight of the material;
- the product design takes advantage of the mechanical properties of the compound for an elastic response similar to that of carbon and glass fiber;
- no risk of breakage or permanent deformation thanks to the high resilience and high resistance to yield and breakage of the compound, even at low temperatures;
- resistance and high elastic modulus allow you to fully exploit the typical geometry of carbon fiber and glass blades without having to use any reinforcement or protection ribs;
- reduced carbon footprint compared to common technopolymers used in the sector and total absence of toxic elements.

W-22

- Blade in new highly reactive technopolymer (FRC®) for immediate thrust.
- Motus series footpocket in two materials, ultra-comfortable, for interchangeable blades.
- Curved at 22° for natural, powerful finning action.

PREDA | PREDA HC

- Open muzzle for Anthracite Flex circular sling diameter 16 mm (PREDA).
- Closed muzzle with pair of Anthracite Flex slings diameter 16 mm (PREDA HC).
- Standard 4 mm wishbone (articulated in the PREDA HC version).
- Anticorodal aluminum barrel.
- Integrated shaft guide.

Made in Italy

Circular barrel Ø 28 mm

Integrated shaft guide

Tahitian inox (AISI 303)
