

A full-page underwater photograph serves as the background. It depicts a female diver in the lower-left foreground, wearing a black wetsuit with 'seac' and 'TYPE' printed on it, and a diving mask with orange accents. She is holding a yellow air hose. In the upper-right, a large sea turtle with a yellowish-brown shell and patterned head swims towards the viewer. The water is clear blue, and a rocky seabed is visible at the bottom.

2026 COLLECTION (IT)

Una fantastica storia italiana

1971

Marco Arata e Attilio Rapallini, veri e propri amanti del mare, appena ventenni, fondano la SEAC (Subacquea E Affini Carasco).

1988

Stefano Makula, atleta SEAC, raggiunge l'incredibile profondità di -102 metri in apnea in assetto variabile presso l'isola di Giannutri e diventa così campione del mondo.

1975

Nascono il primo logo ed il primo catalogo ufficiale SEAC.

1989

La produzione si espande con i nuovi BCD SEAC, tra cui il modello Jump.

1980

Inizia la produzione dei primi fucili subacquei a molla e ad elastico.

1990

SEAC inaugura il nuovo stabilimento di San Colombano Certenoli.

1982

SEAC raggiunge un'altra pietra miliare con la produzione di nuove mute, tra cui la leggendaria Privilege.

1993

Inizia una nuova avventura con la produzione interna di erogatori.

1985

Lo sviluppo e la produzione del leggendario fucile subacqueo Asso segnano un altro passo importante per SEAC e per il mondo della pesca subacquea.

1995

Nasce l'iconica maschera Extreme!

1999

In aprile, Nicola Brischigiario batte un nuovo record mondiale scientifico di apnea lineare sotto il ghiaccio (85m in 1'40") nel lago Verney, con l'utilizzo dell'attrezzatura SEAC.

2008

SEAC realizza una sezione dedicata agli erogatori, con macchinari ANSTI all'avanguardia e tecnologie di nuova generazione.

2001

SEAC progetta e produce un nuovo rivoluzionario BCD: il Pro2000.

frame to
back
system

2010

Vengono sviluppati nuovi modelli di pinne per scuba e apnea, che ampliano ulteriormente la gamma SEAC.

2004

Arriva la seconda generazione di SEAC con l'ingresso in azienda di Daniele Arata.

2012

SEAC apre il suo primo stabilimento negli Stati Uniti e nasce così SEAC USA Corp. con sede inizialmente a New York e poi trasferita a Miami.

2006

SEAC amplia ulteriormente la propria gamma di prodotti e nascono le diverse linee: scuba, snorkeling, apnea e nuoto.

2014

Dopo una ricerca meticolosa, SEAC sviluppa la sua prima gamma di torce a LED, tra cui la rinomata serie "R".

reddot award
product design

2007

Il BCD Icaro vince il RedDot Product Design Award nel 2007.

2017

Inizia la progettazione e la produzione della prima maschera granfacciale: Unica.

Una fantastica storia italiana

2018

Arrivano sul mercato i nuovi computer subacquei da polso Driver e Partner, seguiti da Action e Action HR.

2023

SEAC presenta il suo nuovo hub produttivo, con il quale alimenta l'intera azienda tramite energia solare grazie ai pannelli fotovoltaici.

2019

SEAC apre un reparto completamente dedicato allo stampaggio di maschere e pinne nello stabilimento di San Colombano Certenoli.

2024

Valentina Cafolla ad Anterselva conquista il doppio record mondiale di apnea sotto il ghiaccio (140m).

2021

Arriva sul mercato il nuovo computer subacqueo SCREEN.

2025

Nuova governance aziendale: Daniele Arata è il nuovo Presidente SEAC.

Nascono il TABLET, il primo computer Bluetooth® e la sonda LED TANK PROBE.

2022

Arrivano sul mercato i nuovi computer da polso per apnea APNEA e APNEA HR.

*la storia continua
nelle pagine seguenti...*

2023

Nasce la tecnologia FRC®! La mescola Fully Responsive Compound permette di realizzare pinne più leggere e robuste.

Since
1971

Se “il mare chiama”, noi rispondiamo con il sole.

L'intero stabilimento SEAC è ora alimentato da energia rinnovabile, grazie a un nuovo e potente impianto fotovoltaico.

Questo è il nostro più recente investimento nella sostenibilità e si aggiunge a numerose altre iniziative che mirano a un futuro sostenibile per tutti, come le strategie di re-shoring e la produzione interna per ridurre l'impronta di carbonio derivante dai trasporti, la continua ricerca di nuovi imballaggi a basso impatto ambientale e l'attuazione di politiche aziendali per la riduzione degli sprechi.

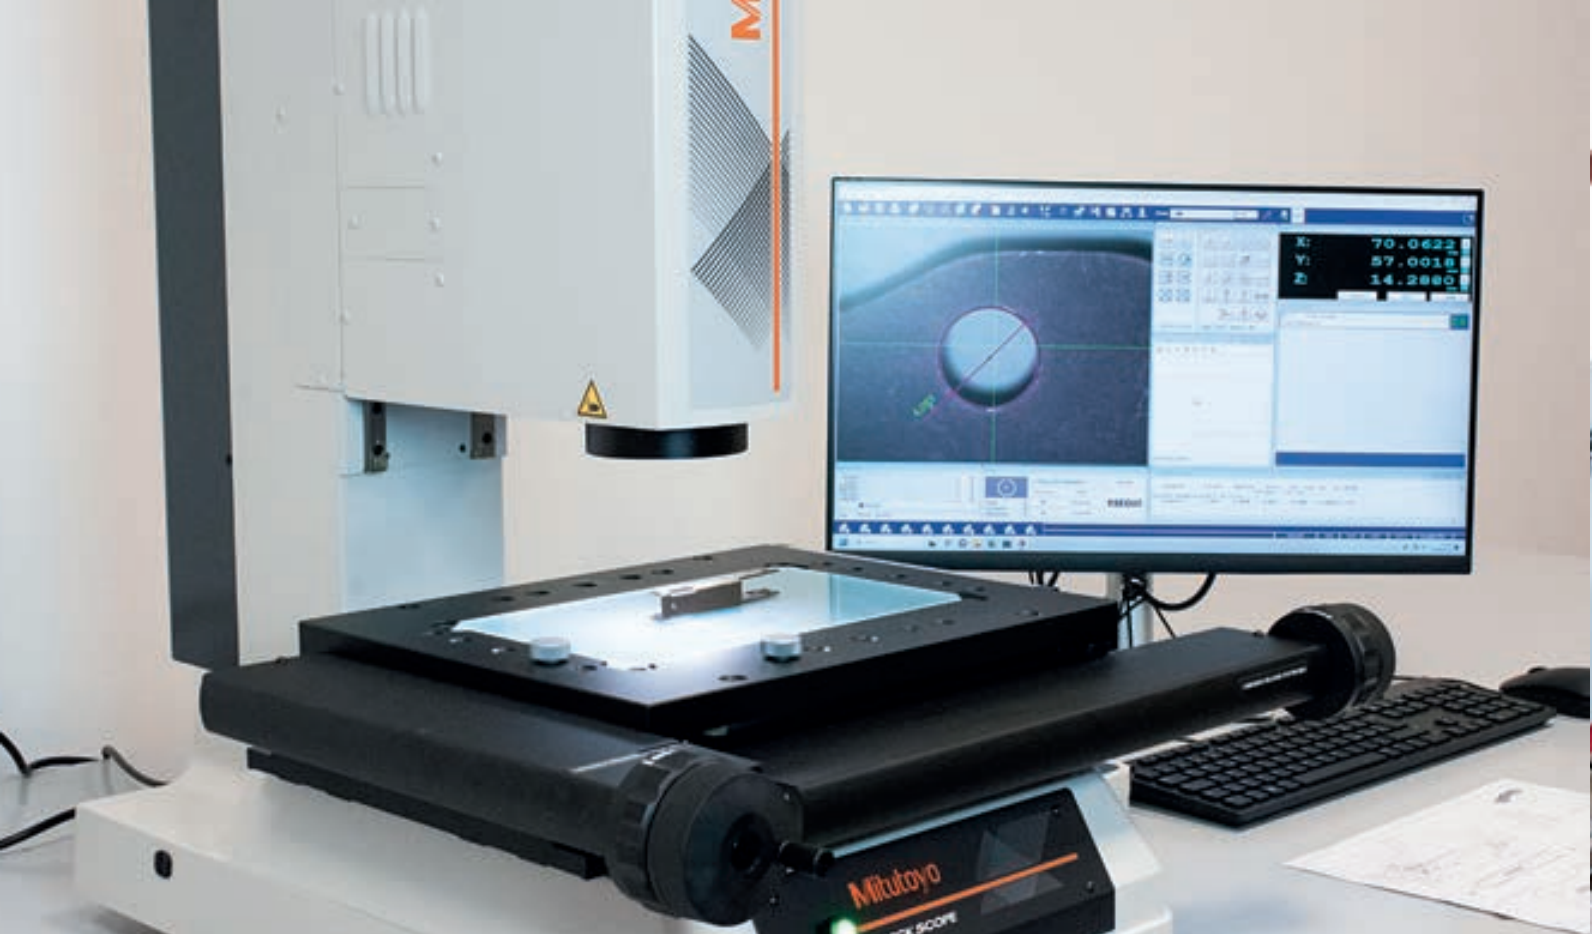

Sede centrale di San Colombano Certenoli (Genova, Italia).
Oltre 15.000 m² di area logistica interna.

Rigorous safety checks on products
thanks to instruments of property to complete all quality control procedures.

Strumenti innovativi in continuo aggiornamento
per realizzare prodotti precisi ed affidabili.

Dall'inaugurazione del nuovo reparto di stampaggio interno, i vantaggi sono evidenti:

- Riduzione del 50% dei rifiuti plastici
- Riduzione dell'impatto sui trasporti
- Maggiore controllo sulla qualità del prodotto finito
- Migliore disponibilità a magazzino

IT500 ICE - BLACK

**NEW
2026**

- Manopola ergonomica integrata da leva dive / pre dive per regolazione sforzo respiratorio ed Effetto Venturi.
- Sistema OWS (Optimized Water Strainer): filtro acqua ottimizzato che rompe il flusso frontale per limitare il rischio di pressione sulla membrana ed evitando, data la sinergia fra le aperture frontali e laterali, possibili auto erogazioni dovute a correnti frontali.
- Scudo frontale e pulsante in morbido PU che ottimizzano sia l'azionamento sia il passaggio dell'acqua, riducendo lo sforzo respiratorio.
- Particolare geometria del condotto di scarico che evita infiltrazioni di acqua nel secondo stadio anche in presenza di forti correnti laterali e convoglia le bolle espulse ai lati del viso evitando fastidiosi passaggi davanti al campo visivo.
- Nuovo salva frusta studiato nel diametro e lunghezza per evitare qualsiasi strozzatura. Curvatura ottimizzata ed ergonomica per l'utilizzatore.
- Primo stadio forgiato a caldo per ridurne al massimo il peso e avere tutte le uscite sia HP che LP ergonomicamente pre-orientate. Bilanciato a membrana ad alte prestazioni. Numero 2 Porte HP. Numero 4 Porte LP.
- Kit ICE: sistema anti freeze del primo stadio che riduce al minimo il problema di congelamento in acque fredde.

MASCHERE

SCUBA 2026

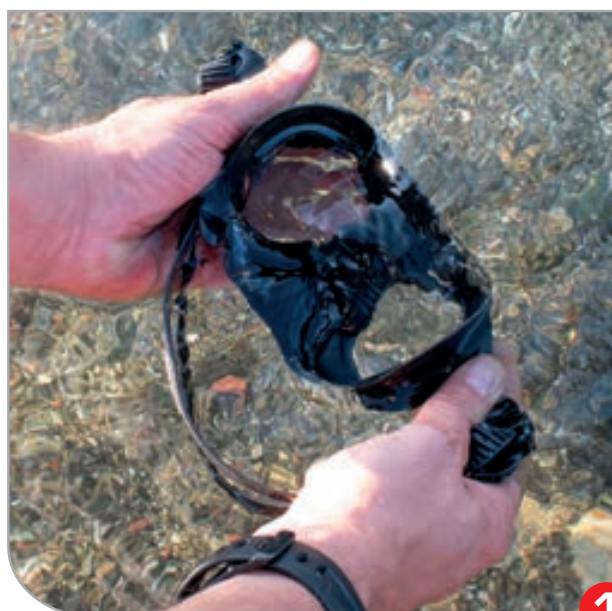

PLAY VIDEO

Chi utilizza una maschera subacquea sa bene quanto l'appannamento dei vetri possa rovinare un'immersione. Questo fenomeno si verifica quando la normale umidità presente all'interno della maschera entra in contatto con la superficie fredda del vetro, trasformandosi in minuscole goccioline che offuscano la visuale.

Per limitare questo problema, che dipende da un insieme complesso di fattori fisici e comportamentali, abbiamo applicato uno speciale trattamento al plasma, denominato **"ANTI-FOG"**, direttamente sui vetri delle nostre maschere. Il trattamento rende il vetro della maschera idrofilico e, una volta eseguita una semplice preparazione da parte dell'utilizzatore, si attiva la protezione che impedisce la formazione della condensa, consentendo una visione nitida durante l'immersione.

COME PREPARARE LA MASCHERA PRIMA DELL'USO:

- Prima di entrare in acqua, bagnare o immergere la maschera per un paio di minuti
- Strofinare delicatamente la parte interna dei vetri con i polpastrelli mentre è immersa
- Svuotare e risciacquare con acqua pulita
- Ripetere i passaggi se necessario

⚠ ATTENZIONE: INFORMAZIONI FONDAMENTALI SUL TRATTAMENTO ANTI-FOG

Le lenti di questa maschera sono state integrate a seguito di un innovativo trattamento volto a ridurre il fenomeno dell'appannamento. A causa della natura innovativa di tale tipo di trattamento, l'efficacia, la durata e la costanza delle sue prestazioni anti-appannamento non possono essere garantite e sono soggette a una naturale e progressiva riduzione in base alla cura, conservazione ed all'uso. Esclusioni di vizi: La diminuzione o la perdita dell'effetto ANTI-FOG è una caratteristica attesa del prodotto e non costituisce un difetto di conformità ai sensi della garanzia legale.

Controlli di sicurezza sulle full-face mask SEAC

SEAC segue due principi fondamentali per la progettazione delle sue maschere da snorkeling integrali, le cosiddette *full-face mask*:

- l'impiego dello **sforzo respiratorio** da parte dell'utente deve essere il minimo possibile, **paragonabile a quello naturale**, fuori dall'acqua;
- il livello di **CO₂** residuo all'interno del facciale durante la fase di inspirazione deve essere **ben sotto ai limiti di sicurezza**.

Non essendoci ancora una normativa europea, SEAC ha sviluppato una serie di **test specifici** attenendosi ai valori previsti dalle seguenti normative europee:

- EN 1972:2015 stabilisce i requisiti per la progettazione e produzione di tubi snorkel, limitatamente agli sforzi respiratori;
- EN 16805:2015 stabilisce i requisiti per la progettazione e produzione di maschere per la subacquea;
- EN 136:2000 stabilisce i requisiti minimi per la produzione di maschere intere di protezione respiratoria, limitatamente ai test di controllo della CO₂ nell'aria inspirata;
- EN 250:2014 relativa agli autorespiratori per uso subacqueo a circuito aperto ad aria compressa e ai suoi componenti, limitatamente ai test di controllo della CO₂ nell'aria inspirata e relativa alle maschere full-face e mezze maschere per SCUBA diving.

Il test report ITALCERT sul tenore di CO₂ residuo

SEAC ha fatto inoltre testare le proprie full-face mask ad un laboratorio indipendente ed ecco i risultati:

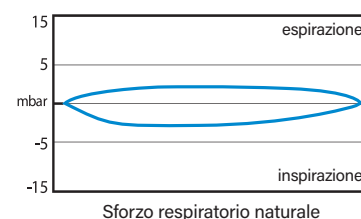

Valori limite di tenore CO₂ su full-face SEAC (risultati del test con 25 RPM/2.5 l)

Nei **laboratori SEAC** i lotti di full-face mask vengono testati con **macchinari Ansti** per la misurazione delle **performance dinamiche della respirazione umana** e con **apparecchiature specifiche SEAC** per il **controllo del livello di CO₂**.

MESU

- Basso profilo, tubo idrodinamico che riduce l'attrito e facilita la respirazione.
- Facile controllo del movimento della bracciata nello stile libero senza necessità di ruotare la testa per la respirazione laterale.
- Facilita l'allenamento cardiovascolare e aumenta la capacità polmonare.
- Fascia frontale elastica e leggera, con inserto morbido integrato e testiera in silicone per garantire il massimo comfort.
- Fibbie di regolazione su entrambi i lati.
- Boccaglio in silicone, riduce al minimo l'affaticamento della mandibola.
- Valvola di spurgo posizionata per massimizzare lo scarico di acqua in eccesso.

GOGGLE CASE

- Astuccio rigido per occhialini da nuoto, perfetto per proteggere e trasportare gli occhialini in sicurezza.
- Morbido rivestimento interno con fascia elastica per fissare gli occhialini.
- Due fori per la ventilazione.
- Facilmente trasportabile grazie al gancio a moschettone in dotazione.

18 x 9,5 x 6 cm

FREEDIVING & SPEARFISHING 2026

SEAC è orgogliosa di presentare la nuova tecnologia FRC® - Fully Responsive Compound, presente in questo momento sulle pale delle nostre pinne lunghe SEAC BM-30 e SEAC W-22.

Tutto è iniziato dalla ricerca di un blend di polimeri che ci permettesse di produrre pinne con prestazioni simili a quelle in fibra di carbonio e vetro, eliminando però i ben noti problemi di fragilità di questi compositi.

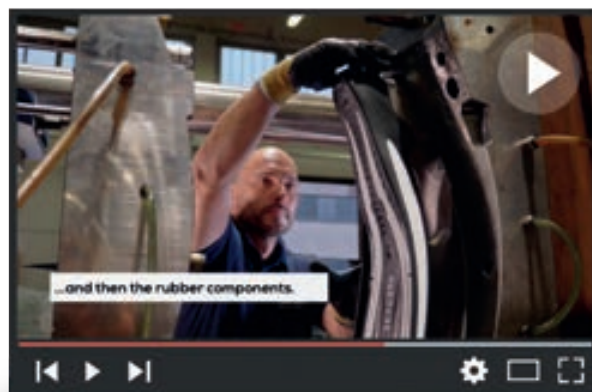

Siamo quindi arrivati a un compound dalle inedite caratteristiche meccaniche che l'esperienza progettuale e produttiva di SEAC ha trasformato in una nuova tecnologia dedicata alla realizzazione di pale per pinne ancor più performanti.

La tecnologia FRC® - Fully Responsive Compound risponde oggi a tutte le nostre esigenze:

- pinne negative e pale più sottili delle precedenti in tecnopolimero grazie alla fluidità e al peso specifico del materiale;
- il design di prodotto sfrutta le proprietà meccaniche del compound per una risposta elastica simile a quella della fibra di carbonio e vetro;
- nessun rischio di rottura o deformazione permanente grazie all'elevata resilienza e all'alta resistenza a snervamento e rottura del compound, anche a basse temperature;
- resistenza e alto modulo elastico permettono di sfruttare a pieno la geometria tipica delle pale in fibra di carbonio e vetro senza dover utilizzare nessuna nervatura di rinforzo o protezione;
- impronta carbonica ridotta rispetto ai comuni tecnopolimeri utilizzati nel settore e totale assenza di elementi tossici.

FIRE | FIRE CAMO

- Testata: di tipo aperto per due elastici circolari TriPower da 14mm con ogiva in Dyneema.
- Impugnatura smontabile in gomma per una presa sicura e confortevole.
- Meccanismo arretrato realizzato interamente in acciaio inox con leveraggio lungo per ridurre lo sforzo di sparo.
- Sganciasagola orientabile per mancini e destrorsi.
- Appoggio sternale sovrastampato in gomma.
- In dotazione: mulinello, asta Shark Laser da 6,5mm (7 mm su versione 110 e 130), coppia di elastici circolari TriPower da 14mm con ogiva in Dyneema bicolore, sagola.
